EXPERIENCE

Tech Amaka, FCT Abuja, Nigeria —Software engineering intern

August 2022 - PRESENT

- Improved software efficiency and user website load times by 45% by implementing asynchronous execution of resource-heavy tasks.
- Created various API endpoints as requested by frontend engineers.
- Made various changes to the front end to import user experience.
- Refactored code, and fixed existing bugs.
- Acquired various skills.
  - Celery and RabbitMQ (for asynchronous emailing)
  - GraphQL (graphene package for Python)
  - Next.js

SKILLS

Backend

Django	Python
GraphQL	REST

Frontend

Next.js	React.js
HTML & CSS	JavaScript

Cloud Services

AWS	Heroku
Cloudinary	

PROJECTS

Triple music — *Django & Next.js music application* (in progress)

A web application for artists to host their music online. The backend is built in Django and Next.js is used on the frontend, I'm using GraphQL for the API layer.

This project also uses custom npm and pip packages I built myself. It's still a work in progress but will soon be completed.

Vice movies— *React.js movies app*

A movies application that works by sourcing torrents from the web and processing them into videos that the user can stream on the website, or download to their device.

It's built mainly in React and combines various JavaScript libraries and APIs to give the user a viewing experience comparable to Netflix. It's also completely free and open source.

ABOUT ME

I am a very curious person, I'll consider this one of the main reasons I use Vim and Linux.

This character also fuels my love for problem-solving.

I also really love anime, I find that nuggets of wisdom can be found in the most unexpected places.

LANGUAGES

English - *fluent*

EDUCATION

Federal University of Technology Minna, — *Bachelor of Science (Geology)*

August 2018 - Present
